<sup>1</sup> According to the U.S. Census Bureau, the county population estimates that are released annually in March are not finalized until the subsequent year's estimates are released. This occurs because the March estimates are based on six months of data (January - June) and are then revised based on a full year of data. As a result, the estimates provided in March can be revised in subsequent years because of updated birth/death data, new prison population or international migration data, U.S. Census Bureau methodology changes, and/or accepted challenges from counties regarding their initial population estimate.

## 2010 - 2018<sup>1</sup> population growth rates for Michigan's 10 largest counties

<sup>1</sup> According to the U.S. Census Bureau, the county population estimates that are released annually in March are not finalized until the subsequent year's estimates are released. This occurs because the March estimates are based on six months of data (January - June) and are then revised based on a full year of data. As a result, the estimates provided in March can be revised in subsequent years because of updated birth/death data, new prison population or international migration data, U.S. Census Bureau methodology changes, and/or accepted challenges from counties regarding their initial population estimate.
