INTRODUCTION
Financial Contributors

The following community organizations are responsible for primary funding of the 2017 Ottawa County Behavioral Risk Factor Survey:

Additional funding for the Ottawa County Behavioral Risk Factor Survey was provided by:
Task Force

Mishelle Bakewell, North Ottawa Community Health System

Tim Breed, Holland Hospital

Patrick Cisler, Community SPOKE

Liz DeLaLuz, Greater Ottawa County United Way

Sara Donkersloot, Spectrum Health Zeeland Community Hospital

Lynne Doyle, Community Mental Health of Ottawa County

Jodi Gogolin, Holland Hospital

Marcia Mansaray, Ottawa County Department of Public Health

Patrick Moran, Greater Ottawa County United Way

Jodi Reimink, Spectrum Health Zeeland Community Hospital

Lisa Stefanovsky, Ottawa County Department of Public Health

Lisa Uganski, Ottawa County Department of Public Health

Jennifer VanSkiver, North Ottawa Community Health System
Background and Objectives

- VIP Research and Evaluation was contracted by the Community Health Needs Assessment (CHNA) team of Ottawa County to conduct a Behavioral Risk Factor Survey (BRFS) as part of their larger community-wide health needs assessment in Ottawa County.

- The Patient Protection and Affordable Care Act (PPACA) passed by Congress in March of 2010 set forth additional requirements that hospitals must meet in order to maintain their status as a 501(c)(3) Charitable Hospital Organization. One of the main requirements states that a hospital must conduct a community health needs assessment (CHNA) and must adopt an implementation strategy to meet the community health needs identified through the assessment. The law further states that the assessment must take into account input from persons who represent the broad interests of the community, including those with special knowledge of, or expertise in, public health.

- In response to the PPACA requirements, organizations serving both the health needs and broader needs of Ottawa County communities began meeting to discuss how the community could collectively meet the requirement of a CHNA. Currently these partners comprise a task force consisting of Ottawa County Department of Public Health, Community Mental Health of Ottawa County, Holland Hospital, North Ottawa Community Health System, Spectrum Health Zeeland Community Hospital, and the Greater Ottawa County United Way.
Information collected from this research will be utilized in the Community Health Needs Assessment for the three hospitals in Ottawa County and in the Health section of the broader United Way Community Assessment.

The overall objective of the BRFS is to obtain information from Ottawa County residents about a wide range of behaviors that affect their health. More specific objectives include measuring each of the following:

- Physical health status indicators, such as perception of general health, disability, chronic pain, and weight (BMI)
- Mental health status indicators, such as mental health status, psychological distress, anxiety disorder, depressive disorder, and suicide
- Health risk behaviors, such as smoking and tobacco use, drinking, diet, and physical activity
- Clinical preventative measures, such as routine physical checkups, oral health, and immunizations
- Chronic conditions, such as diabetes, asthma, and cancer, and their management
Background and Objectives (Continued)

➢ The information collected will be used to:
  ❖ Prioritize health issues and develop strategic plans
  ❖ Monitor the effectiveness of intervention measures
  ❖ Examine the achievement of prevention program goals
  ❖ Support appropriate public health policy
  ❖ Educate the public about disease prevention through dissemination of information
Methodology

- A Behavioral Risk Factor Survey was conducted among 1,318 Ottawa County adults (age 18+) via telephone. The response rate was 38%.

- Disproportionate stratified random sampling (DSS) was used to ensure results could be generalized to the population of Ottawa County. DSS utilizes both listed and unlisted landline sample, allowing everyone with a landline telephone the chance of being selected to participate.

- In addition to landline telephone numbers, the design also targeted cell phone users. Of the 1,318 completed surveys:
  - 613 are cell phone completes (46.5%), and 705 are landline phone completes (53.5%)
  - 466 are cell-phone-only households (35.4%)
  - 170 are landline-only households (12.9%), and
  - 682 have both cell and landline numbers (51.7%)

- For landline numbers, households were selected to participate subsequent to determining that the number was that of an Ottawa County residence. Vacation homes, group homes, institutions, and businesses were excluded.
Respondents were screened to ensure they were at least 18 years of age and resided in Ottawa County, or resided in one of four zip codes that overlap with Ottawa County and neighboring counties (49404, 49423, 49448, 49456) that are considered to be service areas by health care and health-related organizations.

In households with more than one adult, interviewers randomly selected one adult to participate based on which adult had the nearest birthday. In these cases, every attempt was made to speak with the randomly chosen adult; interviewers were instructed to not simply interview the person who answered the phone or wanted to complete the interview.

Spanish-speaking interviewers were used where Spanish translation/interpretation was needed.

The 1,318 households represent 1.4% of the 96,283 households in Ottawa County according to the 2016 U.S. Census estimate.

The margin of error for the entire sample of 1,318, at a 95% confidence level, is +/- 2.7%. This calculation is based on a population of roughly 213,331 Ottawa County residents 18 years or older, according to the 2016 U.S. Census estimate.
Methodology (Continued)

- Unless noted, consistent with the Michigan BRFS, respondents who refused to answer a question or did not know the answer to a specific question were excluded from analysis. Thus, the base sizes vary throughout the report.

- Data weighting is an important statistical process that was used to remove bias from the BRFS sample. The formula consists of both design weighting and iterative proportional fitting, also known as “raking” weighting. The purposes of weighting the data are to:
  - Correct for differences in the probability of selection due to non-response and non-coverage errors
  - Adjust variables of age, gender, race/ethnicity, marital status, education, home ownership, and region to ensure the proportions in the sample match the proportions in the population of Ottawa County adults
  - Allow the generalization of findings to the entire Ottawa County adult population

- The formula used for the final weight is: \( \text{Design Weight} \times \text{Raking Adjustment} \)
Methodology (Continued)

- Adverse Childhood Experiences (ACEs) data were collected using the BRFS 11-item version. The 11 items measure the following adverse groups and subgroups:
  - Abuse:
    - Emotional abuse
    - Physical abuse
    - Sexual abuse
  - Household challenges:
    - Intimate Partner Violence
    - Household Substance Abuse
    - Household Mental Illness
    - Parental Separation or Divorce
    - Incarcerated Household Member

- Five of the 11 questions have “yes” or “no” response categories and the remaining 6 questions have “never,” “once,” or “more than once” response categories. Respondents scored either “0” for each “no” and a “1” for each “yes,” and they scored either a “0” for each “never” and a “1” for each “once” or “more than once.” Their total ACEs score was computed by adding the sum of the scores across the 11 items. The total ACEs scores were segmented into three groups according to the number of adverse childhood experiences they had: none, 1 to 3, and 4 or more.
It should be noted that if the respondent said “don’t know” or refused to answer any of the ACEs items then they were not included in the ACEs analyses by groups. This decision was made because the CHNA team and the researchers believe that coding “don’t know” or “refused” answers as zero and then including them in one of the three groups could possibly create an inaccurate picture of the extent to which adverse childhood experiences exist in the population of Ottawa County residents. As an example, if someone refused to answer all 11 ACE questions, rather than coding them as a none (zero), it was determined best to exclude them from the analyses.

EXECUTIVE SUMMARY
Executive Summary

- In general, Ottawa County adults are physically and emotionally healthier than adults throughout Michigan or across the United States; they fare better on almost all of the key metrics.

- That said, of the 35 key metrics measured, 21 were worse (60.0%) than previous years; in fact, 9 of the 12 (75.0%) chronic conditions were more prevalent this iteration.

- Nearly nine in ten (87.4%) area adults report their health as good or better, while 12.6% report their health as fair or poor. One in ten (10.0%) are considered to have poor physical health (14 or more days per month).
  - Although both of these measures are better than MI and the U.S., they are up from both 2011 and 2014.

- Fewer than one in ten (8.8%) are considered to have poor mental health (14 or more days per month).
  - Similarly, this measure is better than MI and the U.S., but up from both 2011 and 2014.

- One in five (20.9%) adults are disabled, in the sense that they are limited in their activities because of physical, mental or emotional problems or have health problems that require them to use special equipment (e.g., wheelchair, cane).
  - This proportion is better than the state and down slightly from 2011.
Executive Summary (Continued)

- More than eight in ten (83.8%) Ottawa County adults are considered to be psychologically well/healthy per the Kessler 6 questionnaire that was part of the BRFS instrument this year.
  - Still, 13.6% are classified as having mild to moderate psychological distress and 2.5% have severe psychological distress

- Further, 15.0% of area adults report having been told they have anxiety disorder while 17.1% report having been told they have depression.
  - The proportion of those having depression in Ottawa County is slightly lower than MI or the U.S. and it is down from the last time it was measured in 2011
  - The proportion of those having anxiety has remained roughly the same since 2011
  - Despite the fact that two-thirds of adults with anxiety or depression feel very or extremely confident they can manage their conditions well, more than one-third say that area programs and services do not help them manage their condition well

- One in twenty (5.0%) adults has thought about committing suicide in the past year, and of these one in five (20.0%) have actually attempted suicide in the past year.
Executive Summary (Continued)

- Even though there are low proportions of adults with poor mental health or severe psychological distress, one area of opportunity for local health professionals is to formulate a plan to address the fact that sizeable proportions of people with mental health challenges do not take medication or receive treatment for their condition.
  
  - For example, the proportion of adults who currently take medication or receive treatment for a mental health condition or emotional problem is 49.5% among those with mild to moderate psychological distress and 75.6% among those with severe psychological distress
  
  - Further, only half (51.0%) of adults who have poor mental health currently take medication or receive treatment for their mental health
  
  - The good news is that these proportions have improved greatly from 2014

- It is surprising that so few people engage in treatment or medication for mental health conditions considering that nearly all adults (90.0%), regardless of mental health status, believe treatment can help people with mental illness lead normal lives.
  
  - Reluctance to seek treatment or take medication might result from a perceived stigma attached to the label of mental illness
    
    - More than one-third (35.6%) of all adults do not view people as “caring and sympathetic to people with mental illness”
Three in ten (29.9%) adults in Ottawa County are considered to be obese per their BMI, while an additional 33.3% are overweight (but not obese).

- The rate of obesity has increased from 2014 and is no longer better than the U.S. rate
- Respondents consider obesity to be the top health issue in Ottawa County

Moreover, people who are obese tend to see themselves in a better light; only 35.5% see themselves as very overweight, while 54.1% feel they are slightly overweight and 10.3% say they are at about the right weight.

Although more than eight in ten (83.2%) obese adults are trying to lose weight or not gain additional weight, many are pursuing this goal without the advice from health care professionals

- Only half (49.5%) of obese adults in Ottawa County report having received advice on their weight from a health care professional

The prevalence estimates of all chronic conditions measured are lower than state and national estimates, with the exception of skin cancer which is higher than both MI and the U.S.
Specifically with regard to diabetes, one in ten (9.8%) area adults report having it, a rate up from 2011 and 2014.

And of those who don’t have diabetes, an additional 10.9% report having pre-, or borderline, diabetes.

The majority of adults with chronic conditions are confident they can do all the things necessary to manage their condition.

That said, there is clearly an opportunity for improvement with existing programs and services designed to help residents manage their chronic conditions. For example, below is the proportion of adults who feel the existing programs and services do not help them manage their condition well:

- Stroke (56.1%)
- COPD (53.7%)
- Angina/CHD (49.2%)
- Asthma (45.4%)
- Arthritis (40.1%)
- Skin cancer (36.5%)
- Diabetes (33.4%)
One in four (24.1%) area adults has chronic pain, and a similar proportion (27.8%) report that their pain is not managed well.

- There are myriad barriers to treating the pain, but cost and having multiple chronic conditions are at the top

Among adults aged 18-64, 90.8% currently have health care coverage.

- Of those currently with coverage, 5.2% say there was a time in the past year when they were not covered
- Over half (58.8%) have coverage through a plan at work or through a union

Among all adults, 7.4% had to forego a needed doctor visit in the past year due to cost.

- Moreover, in the past year, 7.5% delayed seeking medical care because of the general cost of care, while 7.4% delayed seeking medical care because of the cost of co-pays and/or deductibles
- Additionally, 8.0% report they were not able to take their medication as prescribed due to cost

One in four (24.5%) Ottawa County adults have visited an Urgent Care Center in the past year and 20.0% have visited the Emergency Room.
Executive Summary (Continued)

- While a large majority (84.4%) are at least somewhat confident they can navigate the health care system, 15.6% are not confident. Almost all adults are at least moderately confident they can complete medical forms and almost always understand their condition and any communication from their provider.
  - Those who lack confidence or have trouble understanding their situation tend to be the youngest adults (18-24) and/or have low incomes

- Three-fourths of adults (76.6%) participate in some form of leisure time physical activity, such as running, calisthenics, walking, golfing, or gardening.
  - On the other hand, only four in ten adults participate in physical activities to strengthen their muscles

- The prevalence of cigarette smoking among Ottawa County adults is 17.6%, down slightly from 2014.
  - The overall proportion of homes where at least one person smokes inside the home is low (6.9%); however, this proportion rises to 19.5% for current smokers

- The prevalence of other tobacco use (5.6%) and vaping (6.1%) is also low.

- Three in ten (29.7%) adults have taken prescription pain medication and 7.0% have done so within the past month.
  - Very few say they know anyone who abuses prescription drugs or amphetamines
Executive Summary (Continued)

- Half (51.0%) of Ottawa County adults are considered non-drinkers of alcohol, meaning they consumed no alcohol in the past month. Additionally, 43.3% are light to moderate drinkers and 5.7% are heavy drinkers.
  - 14.1% of adults are binge drinkers, meaning they have consumed at least 4 (if female) or 5 (if male) drinks on at least one occasion in the past month
  - Rates for heavy drinking and binge drinking are now better than both MI and the U.S. and lower than they were in 2011 and 2014

- Fewer than one in five (17.6%) adults consume an adequate amount (five or more times) of fruits and vegetables per day.
  - On average, 31.5% of adults consume less than one serving of fruit per day and 21.4% consume less than one serving of vegetables per day

- More than nine in ten adults report that they:
  - Always have enough food to eat (92.2%)
  - Haven’t had to cut the size of meals, or skip meals, because of lack of money (92.4%)
  - Think it’s easy to find fresh fruits/vegetables in their community/neighborhood (97.0%)
  - Those who have experienced problems accessing needed dental care say lack of insurance and the inability to afford treatment are the main barriers
Executive Summary (Continued)

- Nearly nine in ten adults (87.6%) have a medical home (have a personal care provider) and 5.1% have more than one.
  - Eight in ten (81.3%) adults have visited a doctor for a routine checkup within the past year
  - Almost all adults with children living at home say their children have visited their doctor for a routine checkup within the past year

- Although the vast majority of adults (93.5%) have had no problem obtaining needed dental care, almost one in five adults (18.4%) have not visited a dentist in the past year.

- Seven in ten (70.8%) adults aged 65 or older have had a flu shot within the past year and a similar proportion (72.9%) have had a pneumonia vaccine at some point in their life.
Executive Summary (Continued)

- Although Ottawa County adults, in general, experience fewer adverse childhood experiences compared to adults across Michigan or the U.S., the prevalence of mental illness in the household and the prevalence of living with someone who had been incarcerated are greater in Ottawa County than in Michigan or across the U.S.

  - Three in ten (29.6%) Ottawa County adults have experienced emotional abuse. Roughly one in five have had divorced or separated parents and a similar proportion lived with someone who was a substance abuser.

  - Over half (53.3%) of Ottawa County adults have experienced at least one adverse childhood event, and 14.0% have experienced four or more.

  - There is a direct and linear relationship between the number of ACEs one experiences and negative outcomes later in life.
There is also a direct relationship between health outcomes and both education and income. Positive outcomes are more prevalent among adults with higher levels of education and adults from households with higher income levels, while negative outcomes are more prevalent among those with less education and lower incomes. Examples of this disparity include:

- General health status
- Physical health, disability, and chronic pain
- Mental health, psychological distress, and having anxiety or depression
- Chronic diseases such as diabetes, COPD, or any cardiovascular disease
- Health risk behaviors such as fruit and vegetable consumption, smoking, physical activity, muscle strengthening activity
- Preventive practices such as visiting a dentist and being vaccinated against the flu or pneumonia
- Health care access such as having a primary care provider, having health insurance, lack of access to care and medication due to cost, or being health literate
- Food insufficiency

The link between both education and income and positive health outcomes goes beyond the direct relationship. Those occupying the very bottom groups, for example no high school diploma and/or household income less than $20K (or living below the poverty line), are most likely to experience the worst health outcomes.
There is also a direct relationship between health outcomes and age. In many cases, negative outcomes are more often associated with younger adult age groups, for example:

- Poor mental health, having psychological distress, anxiety, or depression
- No health care coverage and having no personal care provider
- Risk behaviors such as smoking cigarettes and binge drinking
- Food insufficiency
- No routine physical checkup

In other cases, negative outcomes are more associated with older adult groups, such as:

- Fair or poor general health status, poor physical health, and activity limitation
- Having chronic diseases like diabetes, arthritis, cancer, cardiovascular disease, and COPD
- Having chronic pain
- Lack of muscle strengthening activities
There are links between health outcomes and gender. For example:

- Men are more likely than women to:
  - Engage in risk behaviors such as smoking, binge drinking, eating fewer fruits and vegetables
  - Resist preventive practices such as visiting a dentist or having a routine physical exam
  - Lack health insurance or a personal health care provider

- Women are more likely than men to:
  - Be obese or be at a healthy weight
  - Have poor physical health
  - Have poor mental health, psychological distress, anxiety, or depression
  - Have chronic conditions such as asthma, arthritis, and chronic pain
  - Not engage in muscle strengthening activities

There are also links between race and outcomes. Non-Whites are more likely than Whites to:

- Engage in risk behaviors such as smoking, binge drinking, and eating fewer fruits/vegetables
- Not engage in preventive practices such as visiting a dentist or having a routine physical exam
- Lack health insurance or a personal health care provider
- Experience psychological distress
Adults living in the southeast section of Ottawa County fared better than adults in other sections on the following measures:

- General health status
- Activity limitation
- Health risk behaviors such as fruit and vegetable consumption, being physically active, smoking, heavy drinking, and binge drinking
- Preventive practices such as visiting a dentist or having a routine physical exam

The northeast section of the county demonstrates an odd mix where adults fare best on nine of the major outcomes (e.g., vaccinations, five of the chronic conditions) and fare worst on an additional nine major outcomes (e.g., obesity, having no insurance, heavy drinking).

DETAILED FINDINGS
Perception of Community Problems
Top 10 Most Important Health Problems in the Community Today

- Adults perceive the top health problem in Ottawa County to be obesity, followed by cancer, health care costs, substance abuse, and lifestyle choices such as lack of exercise, smoking, and diet.

Q1.1: What do you feel is the most important health problem in your community today? (n=1,221)

Health Status Indicators
Although over half of Ottawa County adults report very good or excellent health, 12.6% report fair or poor health.

The proportion of adults who perceive their health as fair or poor is inversely related to level of education and household income. People living below the poverty line are more likely to report fair or poor health than those above the poverty line.

Q1.2: Would you say that in general your health is... (n=1,318)
One in ten (10.0%) Ottawa County adults have poor physical health.

- The prevalence of poor physical health is directly related to age and inversely related to education and income.
- Further, women and non-Whites experience poor physical health slightly more than men and Whites, respectively.

**Number of Days Physical Health Was Not Good in Past 30 Days**

*14 or more days of poor mental health, which includes stress, depression, and problems with emotions, during the past 30 days.

Q2.2: Now thinking about your mental health, which includes stress, depression, and problems with emotions, for how many days during the past 30 days was your mental health not good? (n=1,311)
Overall, 7.6% of area adults are prevented from doing their usual activities (e.g., self-care, work, recreation).

The largest proportions of adults who experience activity limitation are found among the poorest adults and among those with less than a high school education.

**Q2.3:** During the past 30 days, for about how many days did poor physical or mental health keep you from doing your usual activities, such as self-care, work, or recreation? (n=1,314)
One in five (19.5%) area adults are limited in one or more activities because of a physical, mental, or emotional problem, while 6.0% have a health problem that requires the use of special equipment.

- Persons who experience either limited activity or require special equipment are considered to be **disabled**, and this designation applies to one in five adults in Ottawa County.

**Limited Due to Physical, Mental, or Emotional Problems**
- No, 80.5%
- Yes, 19.5%

**Have Health Problem Requiring Use of Special Equipment**
- Yes, 6.0%
- No, 94.0%

**Disabled**
- 20.9%
The proportion of adults who reported being limited in any activities because of physical, mental, or emotional problems, or reported that they required use of special equipment (such as a cane, a wheelchair, a special bed, or a special telephone) due to a health problem (n=1,312)

### Disabled* (Total Sample)

#### Age
- 18-24: 8.6%
- 25-34: 12.6%
- 35-44: 14.8%

#### Section
- Northwest: 23.4%
- Northeast: 32.3%
- Central: 28.5%
- Southwest: 16.4%
- Southeast: 18.2%

The likelihood of being disabled is directly related to age. Women are more likely to be disabled than men, and Whites are more likely to be disabled than non-Whites. Additionally, disability is more common among those with less than a high school diploma, with the lowest incomes, and/or living in the northeast or central sections of the county.
Psychological Distress

- More than eight in ten (83.8%) Ottawa County adults are considered to be mentally healthy according to the Kessler 6 Psychological Distress Questionnaire.*
  - Conversely, 13.6% experience mild to moderate psychological distress and 2.5% are severely distressed.

</tbody>
</table>

Mentally Healthy (Well) = 83.8%
Mild to Moderate Psychological Distress = 13.6%
Severe Psychological Distress = 2.5%

*Calculated from responses to Q. 18.1-18.6, where none of the time = 1, a little = 2, some of the time = 3, most of the time = 4, and all of the time = 5. Responses were summed across all six questions with total scores representing the above categories: mentally well (6-11), mild to moderate psychological distress (12-19), and severe psychological distress (20+).
Among Ottawa County adults, the groups most likely to be considered to have mild to severe psychological distress include those who: are younger (< age 35), are non-White, have less than a college degree, and have household incomes less than $35K. To this last point, one glaring difference is between those who live below the poverty line (35.1%) and those who live above it (14.3%).

*Calculated from responses to Q. 18.1-18.6 where respondents scored 12 or more across the six items on the Kessler 6 scale. (n=1,294)
Medication and Treatment for Psychological Distress

- Of all Ottawa County adults, 15.4% currently take medication or receive treatment for a mental health condition or emotional problem.
  - However, many of those who could benefit the most from medication/treatment are not getting it: only half (49.5%) of those classified as having “mild to moderate psychological distress” and 51.0% of those classified as having “poor mental health” currently take medication and/or receive treatment for their mental health issues.

Taking Medication or Receiving Treatment for Mental Health Condition or Emotional Problem

- **Yes, 15.4%**
- **No, 84.6%**

Percent Taking Medication/Receiving Treatment by Psychological Distress Category

- **Well**: 8.2%
- **Mild to Moderate Psychological Distress**: 49.5%
- **Severe Psychological Distress**: 75.6%

Percent Taking Medication/Receiving Treatment by “Poor Mental Health” Classification

- **51.0%**

Q18.7: Are you now taking medicine or receiving treatment from a doctor or other health professional for any type of mental health condition or emotional problem? (n=1,299)
Even though nine in ten (90.0%) Ottawa County adults believe treatment can help people with mental illness lead normal lives, just half (52.8%) think people are generally caring and sympathetic to people with mental illness, and this drops to 13.9% among those with severe psychological distress.

This continued stigma could be the reason more people don’t seek treatment even though they could benefit from it.

**“Treatment Can Help People With Mental Illness Lead Normal Lives”**

- Agree Strongly: 57.2%
- Agree Slightly: 32.8%
- Neither Agree Nor Disagree: 6.6%
- Disagree Slightly: 2.9%
- Disagree Strongly: 0.6%

**“People Are Generally Caring and Sympathetic to People With Mental Illness”**

- Agree Strongly: 19.8%
- Agree Slightly: 33.0%
- Neither Agree Nor Disagree: 11.6%
- Disagree Slightly: 25.0%
- Disagree Strongly: 35.6%

18.8 What is your level of agreement with the following statement? “Treatment can help people with mental illness lead normal lives.” Do you – agree slightly or strongly, or disagree slightly or strongly? (n=1,291)
18.9 What is your level of agreement with the following statement? “People are generally caring and sympathetic to people with mental illness.” Do you – agree slightly or strongly, or disagree slightly or strongly? (n=1,294)
One in twenty (5.0%) area adults has thought about committing suicide in the past year.

- Of these, one in five actually attempted suicide in the past year.

---

**Thought of Taking Own Life in Past 12 Months**

- No, 95.0%
- Yes, 5.0%

**Attempted Suicide in Past 12 Months (Among Those Who Thought About Suicide)**

- No, 80.0%
- Yes, was treated, 18.4%
- Yes, did not require treatment, 1.6%

Q20.1: Has there been a time in the past 12 months when you thought of taking your own life? (n=1,265)
Q20.2: During the past 12 months, did you attempt to commit suicide (take your own life)? Would you say... (n=43)
More than six in ten (63.2%) Ottawa County adults are considered to be either overweight or obese per their BMI. More than one-third (35.9%) are at a healthy weight.

Obese = among all adults, the proportion of respondents whose BMI was greater than or equal to 30.0.
Overweight = among all adults, the proportion of respondents whose BMI was greater than or equal to 25.0, but less than 30.0.
Healthy weight = among all adults, the proportion of respondents whose BMI was greater than or equal to 18.5 but less than 25.0.
Underweight = among all adults, the proportion of respondents whose BMI was less than 18.5.
Three in ten (29.9%) area adults are obese per their BMI, and it’s fairly universal among demographics.

- That said, obesity is slightly more common in women than in men and more common in those below the poverty line than in those above it.
- It’s less common among those with a college degree and/or with the highest incomes.

- Southeast         | 30.4%                 |

*Among all adults, the proportion of respondents whose BMI was greater than or equal to 30.0.
More than one-third (35.9%) of Ottawa County adults are at a healthy weight per their BMI.

- More women are at a healthy weight compared to men, and the youngest (18-24) and oldest (75+) adults are more often at a healthy weight compared to adults age 25-74.
- More adults in the central section of the county are at a healthy weight compared to adults living elsewhere in the county.

*Among all adults, the proportion of respondents whose BMI was greater than or equal to 18.5 but less than 25.0.*
Four in ten adults (42.0%) see themselves at about the right weight, while an equal proportion of adults think they are slightly overweight and 11.7% report being very overweight.

Six in ten (59.1%) adults are currently trying to lose or maintain their current weight.
Q11.3: Has a doctor, nurse, or other health professional given you advice about your weight? (n=1,307)
Q11.4: How satisfied were you with that advice? (n=332)

- One in four adults has received advice from a healthcare professional regarding their weight.
  - Of these, the vast majority (83.2%) are satisfied with that advice.
Weight Control (Continued)

- In light of the fact that nearly two-thirds of adults in Ottawa County are either overweight or obese per this BRFS, it is surprising that many are not receiving advice from health care professionals regarding their weight.
- Further, many of those overweight or obese see themselves in a slightly better image; for example, 54.1% of those considered obese per their BMI see themselves as only slightly overweight, and 39.6% of those who are overweight view themselves as about the right weight.

### Trying to Lose/Maintain Weight by BMI Category “Overweight” or “Obese”

Health Care Access
Health Care Coverage

- More than nine in ten (90.8%) adults under age 65 have health care coverage.
- The most widespread primary source of health coverage for all adults, by far, is a plan purchased through an employer or union.
- Slightly more than one in ten (11.3%) purchase health coverage on their own.

Currently Have Health Coverage
(Among Adults 18-64)

- Yes, 90.8%
- No, 9.2%

Primary Source of Health Coverage
(Total Sample)

- A plan purchased through an employer or union: 58.8%
- Medicare: 12.2%
- A plan that you or another family member buys on your own: 11.3%
- Medicaid or other state program: 8.9%
- TRICARE, VA, or military: 0.6%
- None: 8.1%

Q3.1: Do you have any kind of health care coverage, including health insurance, prepaid plans such as HMOs, or government plans such as Medicare or Indian Health Services? (n=904)
Q3.2: What is the primary source of your health coverage? Is it....? (n=1,304)
Lack of Health Care Coverage

- Adults most likely to lack health care coverage come from groups that are male, are non-White, have lower incomes (<$35K), have less than a high school diploma, and live in the northeast section of the county.

### No Health Care Coverage* (Among Adults 18-64)

*Among adults aged 18-64, the proportion who reported having no health care coverage, including health insurance, prepaid plans such as HMOs, or government plans, such as Medicare.
Among those currently insured, one in twenty (5.2%) Ottawa County adults have gone without health care coverage in the past year. Those most impacted tend to be younger (<35), non-White, lacking a high school diploma, and/or in low income households.
Among all Ottawa County adults, 7.4% have foregone health care in the past year due to cost. Equal proportions have delayed medical care over the past year because of general health care costs and because of out-of-pocket expenses such as co-pays and deductibles.

**Could Not Receive Needed Medical Care in Past 12 Months Due to Cost**

- No, 92.6%
- Yes, 7.4%

**Reasons for Delays in Getting Needed Medical Care**

- Cost of health care services in general: 7.5%
- Cost of co-pays and/or deductibles: 7.4%
- Cost of prescription drugs: 2.7%
- Couldn’t get an appointment soon enough: 2.2%
- Didn’t have transportation: 1.2%
- Once you got there, had to wait too long to see doctor: 0.7%
- Clinic/office wouldn’t accept insurance: 0.6%
- Clinic wasn’t open: 0.4%
- Other: 1.6%
- No delays in getting medical care/ didn’t need care: 82.1%

Q3.5: Was there a time in the past 12 months that you needed to see a doctor but could not because of cost? (n=1,318)
Q3.6: There are many reasons why people delay getting needed medical care. Have you delayed getting needed medical care for any of the following reasons in the past 12 months? (n=1,309)
The barrier of health care costs prevents certain subpopulations from seeking needed medical care more than others. For example, costs are more likely to be a barrier for: younger adults (25-44), non-Whites, those with less than a college education, and those with low incomes or below the poverty line.

**No Health Care Access During Past 12 Months Due to Cost** *(Total Sample)*

Q3.10: Was there a time in the past 12 months when you did not take your medication as prescribed, such as skipping doses or splitting pills, in order to save on costs? Do not include over the counter (OTC) medication. (n=1,186)
Among Ottawa County adults, 24.5% and 20.0% have visited an Urgent Care Center and the Emergency Room, respectively, in the past 12 months.

Both of these proportions are up slightly from 2014.
A large majority (84.4%) of adults are at least somewhat confident they can successfully navigate the health care system; however, 15.6% are not very or not at all confident.

The most confident groups are those that are at least 65 years old, have incomes of $20K or more, and/or live in the southeast section of the county. Conversely, those least confident are young adults under age 25, those with incomes under $20K, and those living in the central section of the county.

Q3.11: How confident are you that you can successfully navigate the health care system? Would you say....? (n=1,306)

Confidence In Navigating The Healthcare System

- Extremely Confident: 15.0%
- Very Confident: 42.6%
- Somewhat Confident: 26.8%
- Not Very Confident: 8.3%
- Not At All Confident: 7.3%

Confident:

---

Q7.1: How confident are you in filling out medical forms by yourself? For example, insurance forms, questionnaires, and doctor’s office forms. Would you say...

(n=1,312)
The vast majority of Ottawa County adults rarely or never have problems either (1) learning about their health condition because of difficulty understanding written information, or (2) understanding written or verbal information provided by their health care provider.

Still, more than one in ten area adults do have these issues at least some of the time.
Risk Behavior Indicators
More than three-fourths (76.6%) of adults participate in leisure time physical activity outside of their job.

- Of those who do, eight in ten (80.4%) participate at least three times per week. Almost six in ten (57.6%) participate for less than four hours per week, while 23.4% participate for six hours or more.
Physical activity is directly related to income and education; those with higher incomes and/or higher levels of education tend to be more active than those with less.

- Adults in the southeast section of Ottawa County are more active than those in other sections.

No Leisure Time Physical Activity* (Total Sample)

- Among all adults, the proportion who reported not participating in any leisure-time physical activities or exercises, such as running, calisthenics, golf, gardening, or walking, during the past month.

**Age**
- 18-24: 19.3%
- 25-34: 23.6%
- 35-44: 18.6%
- 45-54: 23.4%
- 55-64: 24.9%
- 65-74: 25.5%
- 75+: 34.6%

**Gender**

- Above Poverty Line: 21.3%

**Education**
- < High School: 39.4%
- High School Grad: 29.3%
- Some College: 22.0%
- College Grad: 15.5%

**HH Income**
- <$20,000: 41.2%
- $20,000-$34,999: 30.9%
- $35,000-$49,999: 23.7%
- $50,000-$74,999: 21.6%
- $75,000+: 13.8%

**Section**
- Northwest: 26.1%
- Northeast: 23.2%
- Central: 28.3%
- Southwest: 25.7%
- Southeast: 13.5%
Q14.4: During the past month, how many times per week, or per month, did you do physical activities or exercises to STRENGTHEN your muscles? DO NOT count aerobic activities like walking, running, or bicycling. Count activities using your own body weight like yoga, sit-ups or push-ups and those using weight machines, free weights, or elastic bands. (n=1,299)

Among Ottawa County adults, six in ten (60.3%) engage in no muscle strengthening activities, while 34.3% perform muscle-strengthening activities at least twice a week.

The latter group is more likely to be younger (under 35), male, college educated, and/or from high income households ($75K+).
Cigarette Smoking

- More than one-third (37.2%) of Ottawa County adults have smoked at least 100 cigarettes in their lifetime. Of these, 36.8% currently smoke every day and 10.7% smoke some days.
  - Using 100 cigarettes as the minimum to be classified as a current or former smoker, 17.6% of Ottawa County adults are considered to be current smokers, 19.5% are former smokers, and 62.9% of adults never smoked.

</tbody>
</table>

Q8.1: Have you smoked at least 100 cigarettes in your entire life? (n=1,317)
Q8.2: Do you now smoke cigarettes everyday, some days, or not at all? (n=503)

*Among all adults, the proportion who reported that they had ever smoked at least 100 cigarettes (5 packs) in their life and that they smoke cigarettes now, either every day or on some days.

**Among all adults, the proportion who reported that they had ever smoked at least 100 cigarettes (5 packs) in their life but they do not smoke now.
Cigarette smoking is inversely related to age, education, and income; younger adults (25-34), those with less education, and those with lower incomes are more likely to smoke than others.

- Men and non-Whites are more likely to smoke than women and Whites, respectively.

### Current Cigarette Smoking by Demographics

#### Age
- 18-24: 19.0%
- 25-34: 34.4%
- 35-44: 21.9%

### Anyone Besides Self Smoked Cigarettes, Cigars, or Pipes Inside Home in Past 7 Days

- **No, 94.9%**
- **Yes, 5.1%**

Among Smokers, yes = 19.5%

---

Q8.4: How many people that live with you smoke cigarettes, cigars, little cigars, pipes, water pipes, hookah, or any other tobacco products? (n=1,316)

Q8.5: Not counting decks, porches, or detached garages, how many of these people smoke cigarettes, cigars, little cigars, pipes, water pipes, hookah, or any other tobacco product inside your home? (n=1,316)

Q8.6: Next I am going to ask you about exposure to smoke from other people’s cigarettes, cigars or pipes. Please do not include yourself. In the past seven days, did anyone smoke cigarettes, cigars, or pipes anywhere inside your home? (n=1,317)
With regard to alcohol consumption, half of Ottawa County adults are non-drinkers, and slightly more than four in ten (43.3%) are considered to be light to moderate drinkers. Heavy drinkers comprise 5.7% of Ottawa County adults, meaning they consume an average of more than seven (if female) or fourteen drinks (if male) per week.

### Number of Days Drank Alcohol in Past 30 Days

- None: 50.4%
- 1 to 2 days: 10.5%
- 3 to 5 days: 11.4%
- 6 to 10 days: 13.0%
- More than 10 days: 14.5%

### Average Number of Drinks When Drinking

- 1 drink: 39.1%
- 2 drinks: 32.2%
- 3 drinks: 14.2%
- 4 to 5 drinks: 9.7%
- More than 5 drinks: 4.7%

### Drinking Status

- Non Drinker: 51.0%
- Light/Moderate Drinker: 43.3%
- Heavy Drinker: 5.7%

Q17.1: During the past 30 days, how many days per week or per month did you have at least one drink of any alcoholic beverage such as beer, wine, a malt beverage, or liquor? (n=1,294)

Q17.2: One drink is equivalent to a 12-ounce beer, a 5-ounce glass of wine, or a drink with one shot of liquor. During the past 30 days, on the days when you drank, about how many drinks did you drink on the average? (n=601)
Adults age 25-34 are more likely to engage in heavy drinking than other age groups. The largest proportions of heavy drinkers are found in the northeast section of Ottawa County.

### Heavy Drinking* (Total Sample)

#### Age

*Among all adults, the proportion who reported consuming an average of more than two alcoholic drinks per day for men and one per day for women in the previous month.
Among Ottawa County adults who drink alcohol, half (49.3%) have at most consumed one to two drinks on any occasion in the past 30 days, while 16.4% have consumed six or more drinks.
Among all adults, 14.1% have engaged in binge drinking in the past 30 days. Among those who drink, this proportion rises to 28.7%.

Among all adults, 14.1% have engaged in binge drinking in the past 30 days. Among those who drink, this proportion rises to 28.7%.

Q17.3: Considering all types of alcoholic beverages, how many times during the past 30 days did you have X (x=5 for men, x=4 for women) or more drinks on an occasion? (n=1,273)
The prevalence of binge drinking is highest, by far, among adults age 25-34. It is also higher among men than women and higher among non-Whites compared to Whites.
Three in ten (29.7%) Ottawa County adults has taken prescription pain medication at some point.

- Women are more likely than men to have used prescription pain medication.
- Prescription drug use is least common among the youngest adults (18-24).

### Have Taken Prescription Pain Medication

Q6.1: Have you taken prescription pain medication, such as OxyContin, Percocet, Vicodin, or codeine? (n=1,307)
Very few Ottawa County adults say they know anyone who takes pain medication, stimulants, or amphetamines that are not prescribed to them.

Q6.2: Do you know anyone who currently takes pain medication that is not prescribed to them? (n=1,313)
No, 94.5%  Yes, 5.5%

Q6.3: Do you know anyone who currently takes stimulants or amphetamines, such as Ritalin, Adderall, Dexadrine, or Concerta, that is not prescribed to them? (n=1,311)
No, 92.8%  Yes, 7.2%
Fruit Consumption

Three in ten (31.5%) adults consume less than one serving of fruit per day; four in ten among non-Whites.

Adults less likely to fall into this group are the oldest (75+), those with college degrees, and those with the highest incomes ($75K+).

Similarly, slightly more than seven in ten (72.9%) Ottawa County adults aged 65 or older have been vaccinated against pneumonia. Those most vulnerable have less education and/or live in the central section of the county.

Q16.2: A pneumonia shot or pneumococcal vaccine is usually given only once or twice in a person’s lifetime and is different from the flu shot. Have you ever had a pneumonia shot? (n=388)
Almost all children under age 18 have visited a health care provider in the past year for a routine checkup or physical/well-being exam.

- **Children Ages 0 - 5**
  - Within Past Year, 98.8%
  - Within Past 2 Years, 1.2%

- **Children Ages 6 - 11**
  - Within Past Year, 96.3%
  - Within Past 2 Years, 3.5%
  - Within Past 5 Years, 0.3%

- **Children Ages 12 - 17**
  - Within Past Year, 93.9%
  - Within Past 2 Years, 4.3%
  - Within Past 5 Years, 1.7%

Q10.5: How many children less than 18 years of age live in your household? (n=1,316)
Q10.6: What are the ages of this child/these children? (n=344)
Q10.7: About how long has it been since [CHILD/AGE] last visited a doctor (healthcare provider) for a routine checkup? A routine checkup is a general physical exam [or well child exam], not an exam for a specific injury, illness, or condition [or only for participating in sports]. (n=338)
Chronic Conditions
Arthritis, depression, and anxiety are the most prevalent chronic conditions among adults in Ottawa County, followed by diabetes and asthma. Prevalence of heart related problems remains low.

- One in ten (9.8%) adults have been told they have diabetes and an additional 10.9% have pre-diabetes.

**Prevalence of Chronic Health Conditions**

- **Arthritis (including rheumatoid, gout, lupus, fibromyalgia)** (n=1,310) 19.4%
- **Depressive Disorder** (n=1,308) 17.1%
- **Anxiety Disorder** (n=1,309) 15.0%
- **Lifetime Asthma** (n=1,315) 12.7%
- **Pre-Diabetes or Borderline Diabetes*** (n=1,155) 10.9%
- **Diabetes** (n=1,314) 9.8%
- **Current Asthma** (n=1,311) 8.7%
- **Skin Cancer** (n=1,313) 6.3%
- **Cancer (Non-Skin)** (n=1,314) 4.8%
- **COPD (including emphysema, chronic bronchitis)** (n=1,314) 4.0%
- **Heart Attack** (n=1,314) 3.7%
- **Angina/Coronary Heart Disease** (n=1,314) 3.3%
- **Stroke** (n=1,311) 1.7%

*Base=those who don’t currently have diabetes.

Q4.1-Q4.13: Has a doctor, nurse, or other health professional EVER told you that you had...

Q4.2: Do you still have asthma?

Q4.14: Was this [depressive disorder] following the birth of a child or related to pregnancy?
Prevalence of Diabetes

- One in ten area adults has been told by a health care professional that they have diabetes.
- The prevalence of diabetes is greater for older adults (55+), Whites, those with incomes less than $35K, those with less than a high school diploma, and those in the northeast section.

**Ever Told Have Diabetes**
- Yes, 9.8%
- No, 82.7%
- Pre-/Borderline, 6.7%
- Only During Pregnancy, 0.8%

Q4.3: Has a doctor, nurse, or other health professional EVER told you that you had diabetes? (n=1,314)
Almost eight in ten (78.0%) adults with diabetes are very or extremely confident in managing their condition despite the fact that only one-third (32.6%) say that area programs and services help them manage their diabetes very or extremely well.

The few who are less than confident cite lack of, or inadequate, programs and services and the fact that they don’t have insurance as the reasons for their lack of confidence.

### Level of Confidence in Managing Diabetes

- **Extremely confident**: 24.9%
- **Very confident**: 53.1%
- **Somewhat confident**: 14.1%
- **A little confident**: 8.0%
- **Not at all confident**: 8.0%

### Reasons for Lack of Confidence

- **Don’t have insurance**: 44.8%
- **Not enough programs/services**: 31.8%
- **Existing programs/services inadequate**: 31.8%
- **Chronic conditions make it tough to be mobile**: 31.8%
- **Transportation issues**: 18.8%
- **Too many chronic issues to manage**: 4.6%

### How Well Existing Programs/Services Help with Management

- **Extremely well**: 7.5%
- **Very well**: 25.1%
- **Somewhat well**: 33.9%
- **Not very well**: 6.2%
- **Not at all well**: 27.2%
- **Not at all/not very well**: 33.4%

*Caution: small base size

Q5.1: Having an illness often means doing different tasks and activities to manage your condition. How confident are you that you can do all the things necessary to manage your diabetes? Would you say you are...

Q5.2: (If not at all confident or a little confident:) Why do you say you are [rating from above] that you can do all the things necessary to manage your diabetes? 

Q5.3: How well do you feel the existing programs and services in the community help you in managing your diabetes? Would you say...

(n=157)

(n=4*)
One in ten area adults has been told by a health care professional that they have pre- or borderline diabetes.

- The prevalence of pre-diabetes is greater for older adults, females, Whites, those with incomes of $50K or more, and those living in the southeast section of the county.
Roughly one in eight area adults has been told by a health care professional at some point in their life that they had asthma.

- The prevalence of lifetime asthma is greater for women, those with incomes less than $35K, and those in the northeast section.

*Caution: small base size
Prevalence of Stroke

- Few Ottawa County adults have had a stroke.
- The highest prevalence of stroke can be found in the highest age and lowest income groups.

Ever Told Had a Stroke*
(Total Sample)

1.7%
Almost six in ten (57.3%) area adults who have had a stroke are very or extremely confident in managing their condition despite the fact that a similar proportion (56.1%) say that area programs and services do not help them manage their condition well.

The few who are less than confident cite transportation most often as a barrier to feeling confident.

Q5.1: Having an illness often means doing different tasks and activities to manage your condition. How confident are you that you can do all the things necessary to manage your stroke? Would you say you are... (n=39)

Q5.2: (If not at all confident or a little confident:) Why do you say you are [rating from above] that you can do all the things necessary to manage your stroke? (n=3*)

Q5.3: How well do you feel the existing programs and services in the community help you in managing your stroke? Would you say... (n=35)

*Caution: small base size
One in fifteen (6.7%) Ottawa County adults have had a heart attack, angina/CHD, or stroke.
The highest prevalence of cardiovascular disease can be found in the highest age group (75+), the lowest education group, and the lowest income groups.

6.7%
Prevalence of Skin Cancer

- One in sixteen (6.3%) Ottawa County adults has skin cancer.
  - The prevalence of skin cancer is higher among the oldest groups (65+), those with the most education, and those living in the southeast section of the county.

*Among all adults, the proportion who reported that they were ever told by a doctor that they have chronic obstructive pulmonary disease (COPD), emphysema, or chronic bronchitis.
More than six in ten (64.1%) adults with COPD are very or extremely confident in managing their condition despite the fact that over half (53.7%) say area programs and services do not help them manage their COPD well.

Among the few who are less than confident, lack of, or inadequate, programs and services and lack of health insurance are cited as barriers to their confidence.

**Level of Confidence in Managing COPD**
- Extremely confident: 14.4%
- Very confident: 49.7%
- Somewhat confident: 20.8%
- A little confident: 15.1%
- Not at all confident: 15.1%

**Reasons for Lack of Confidence**
- Existing programs/services inadequate: 90.9%
- Not enough programs/services: 80.1%
- Do not have health insurance: 65.6%
- Too hard to remember/forget easily: 9.1%

**How Well Existing Programs/Services Help with Management**
- Extremely well: 6.2%
- Very well: 25.0%
- Somewhat well: 15.1%
- Not very well: 15.3%
- Not at all well: 38.4%
- Not at all/not very well: 53.7%

*Caution: small base size*

Q5.1: Having an illness often means doing different tasks and activities to manage your condition. How confident are you that you can do all the things necessary to manage your COPD? Would you say you are... (n=77)

Q5.2: (If not at all confident or a little confident:) Why do you say you are [rating from above] that you can do all the things necessary to manage your COPD? (n=4*)

Q5.3: How well do you feel the existing programs and services in the community help you in managing your COPD? Would you say... (n=72)
Prevalence of Arthritis

- One in five (19.0%) area adults have arthritis, and this is largely a condition that comes with age.
  - The disease is also more common in women than men, more common in Whites compared to non-Whites, and more common among adults with incomes below $50K compared to adults with higher incomes.
  - Arthritis is less common in the northeast and southwest sections of Ottawa County.

*Among all adults, the proportion who reported ever being told by a health care professional that they had a depressive disorder (including depression, major depression, dysthymia, or minor depression)
Depressive Disorder Management

Almost two-thirds (64.3%) of area adults with depression are very or extremely confident in managing their condition, although they are split as to how well area programs and services help them manage their condition.

Those who are less than confident cite myriad reasons, including cost or insurance barriers, their multiple chronic conditions, the lack of or inadequacy of existing programs and services, forgetfulness, and transportation issues.

**Level of Confidence in Managing Depression**
- Extremely confident: 20.2%
- Very confident: 44.1%
- Somewhat confident: 25.7%
- A little confident: 3.7%
- Not at all confident: 6.3%

**Reasons for Lack of Confidence**
- Too costly/can’t afford: 32.0%
- Too many chronic issues to manage: 28.4%
- Existing programs/services inadequate: 27.2%
- Too hard to remember/forget easily: 15.1%
- Not enough programs/services: 9.7%
- Transportation issues: 9.1%
- Insurance doesn’t cover treatment: 7.4%
- Do not have health insurance: 6.1%
- Chronic conditions make it tough to be mobile: 4.1%

**How Well Existing Programs/Services Help with Management**
- Extremely well: 8.7%
- Very well: 29.5%
- Somewhat well: 27.1%
- Not very well: 8.0%
- Not at all well: 26.6%
- Not at all/not very well: 34.6%

Q5.1: Having an illness often means doing different tasks and activities to manage your condition. How confident are you that you can do all the things necessary to manage your depression? Would you say you are… (n=218)

Q5.2: (If not at all confident or a little confident:) Why do you say you are [rating from above] that you can do all the things necessary to manage your depression? (n=18*)

Q5.3: How well do you feel the existing programs and services in the community help you in managing your depression? Would you say… (n=199)
One-fourth (24.1%) of Ottawa County adults suffer from chronic pain.

- Chronic pain is more common among women, those age 55 or older, and those who have incomes less than $35K.
- Conversely, it is less common among adults age 18-24, those with college degrees, and those with the highest incomes.

Q6.4: Do you suffer from any type of chronic pain; that is, pain that occurs constantly or flares up frequently? (n=1,313)
More than one-fourth (27.8%) of Ottawa County adults who suffer from chronic pain say their pain is not well managed.

More than four in ten (42.4%) of those with chronic pain report myriad barriers to treating their pain, including cost, multiple chronic issues, lack of programs that could help them deal with the pain better, and insurance issues.

Adverse Childhood Experiences

- Although Ottawa County adults, in general, experience fewer adverse childhood events compared to adults across Michigan or the U.S., the prevalence of mental illness in the household or living with someone who had been incarcerated is greater in Ottawa County than in Michigan or across the U.S.
- Three in ten (29.6%) Ottawa County adults have experienced emotional abuse and roughly one in five have had divorced or separated parents and/or lived with someone who was a substance abuser.
